<u>APPENDIX</u>:

The Appendix includes the following item(s):

☒ - a new or amended Abstract of the Disclosure

ABSTRACT OF THE DISCLOSURE

A method for processing evaluation data includes a data acquisition phase where: a) at least one entity is generated as a function of the intrinsic characteristics of the entity, b) an initial status of the entity is generated and transmitted, c) an action is generated and transmitted as a function of the initial status, then d) resultant statuses are generated and transmitted during the evolutionary course of the entity at fixed times, the resultant statuses being at least a function of the initial status and the actions. The method further includes a second stage for use of the data, where statistical data is generated as a function of criteria fixed on following the structure of at least one of the actions a), b), c) and d) of the acquisition phase.
